

## SPREAD ADHESIVE

## CLEAR

Clear is a contact effective and wetting anionic spreading adhesive. It increases adhesion to the leaf surface by mixing with fertilizers and pesticides applied to the leaf surface and extends the life of the surface by providing maximum wettability.

## **APPLICATION DOSAGE AND USAGE**

Depending on the need in all plants; 100-250 cc is applied to 100 liters of water from the leaf. It is applied with sufficient amount of water in 1000 cc doses per 1000 m2 from the soil.
